

Nicolas Pieper

ENGINEERING MANAGER

Luxembourg · nicolas@pieper.fr · linkedin.com/in/nicolaspieper · nicolaspieper.com

PROFILE

Engineering Manager with **10+ years** designing, modernizing and operating business-critical platforms for secure communications, document management and digital services, from industrial IoT platforms managing more than **one million connected devices** to banking document factories processing **10 million reports per month**. Today, I lead a team of **ten full-stack engineers** in Luxembourg and remain involved in architecture, delivery and production.

EXPERIENCE

Engineering Manager

2024 – PRESENT

Victor Buck Services · Luxembourg

- Lead a team of **ten full-stack developers** building secure document and communication products for financial institutions and governmental organizations
- Own architecture and modernization decisions across a portfolio of business-critical products and shared technical platforms
- Prioritize the portfolio across new development, legacy modernization, technical debt, security requirements and production support
- Introduced explicit product ownership and backup responsibilities, improving continuity, knowledge sharing and resilience
- Coordinate development, infrastructure, architecture, security and business stakeholders, and communicate with partners and senior management
- Drive adoption of AI-assisted development within security, confidentiality and governance constraints, with strong team adoption and measurable productivity potential

Senior Full-Stack Engineer

2023 – 2024

Victor Buck Services · Luxembourg

- Took ownership of an authentication, authorization and accounting platform for secure document services
- Designed and introduced **TOTP-based strong authentication**
- Improved CI/CD pipelines using Jenkins and Kubernetes
- Led Java and Spring migrations across several applications, reducing technical debt and improving maintainability
- Mentored junior developers and shared engineering best practices

Independent Software Engineer · Selected projects

2022 – PRESENT

Nicolas Pieper Engineering · Remote

- Help organizations design and deliver scalable digital platforms, from architecture and implementation to production
- Focus on complex business requirements, high-volume processing and secure platforms
- Assignments spanning modern Java architectures, cloud-native infrastructure, product and engineering strategy

Worldline · Luxembourg

- Designed and delivered a banking document-generation platform processing up to **10 million reports per month** in a **PCI-DSS-compliant** environment
- Designed the platform's Java and microservices architecture, producing PDF, AFP and PostScript communications from databases, XML files and reusable templates
- Benchmarked document-rendering technologies for performance, quality and maintainability
- Built an Angular dashboard for monitoring and operational control
- Implemented CI/CD pipelines and defined performance and reliability indicators
- Created an OpenAPI-based integration model reused by other Worldline teams

Worldline · Lyon

- Evolved an industrial IoT platform connecting more than **one million devices simultaneously** for major European home-appliance manufacturers, including Gorenje and Bosch/Siemens
- Designed a large-scale real-time notification system using MQTT and mobile push notifications
- Rebuilt the backend around Spring Cloud microservices
- Led the migration toward **Azure PaaS, Kubernetes and Docker**, improving scalability, observability and maintainability
- Managed environments, CI/CD pipelines and production stability
- Coordinated a Romanian nearshore team; worked daily with customers and teams across Slovenia, Austria, Germany and Spain

SKILLS

Leadership & delivery	Team leadership and mentoring · Technical roadmaps · Product ownership · Portfolio prioritization · Stakeholder management · Legacy modernization · Engineering process improvement · CI/CD and operational reliability · AI-assisted development
Architecture & engineering	Distributed systems · Microservices · High-volume processing · Event-driven architectures · Identity and access management · API design · Secure document platforms · Industrial IoT · Production engineering
Technologies	Java · Spring · Quarkus · React · Angular · Oracle · Keycloak · RabbitMQ · MQTT · OpenAPI · Kubernetes · Docker · Azure · Jenkins · GitLab · Elastic · Splunk · Dynatrace

EDUCATION

Master's Degree in Engineering — École Nationale d'Ingénieurs de Brest	2013 – 2016
Computer Science, Faculty of Engineering — Université de Sherbrooke	2015 – 2016
Bachelor's Degree in Microelectronics, Electronics and Automation — Université de Lorraine	2012 – 2013
Higher Technician Certificate in Electronic Systems — Lycée Condorcet de Schoeneck	2010 – 2012

LANGUAGES

French — native English — professional
